### OKK A DIVERSIFIED MANUFACTURER OF MACHINE TOOLS

#### Specializes In:

Machining centers  
Graphite cutting machining centers  
Grinding centers  
CNC Milling machines  
Conventional milling machines  
Total die and mold making systems  
Flexible manufacturing cells and systems

#### Other Products Include:

Water Maters

#### NOTE :

OKK reserves the right to change the information contained in this brochure without notice.

OKK is not responsible to make changes to previously sold machines or accessories.

The machines in the photographs of this brochure may include optional accessories.

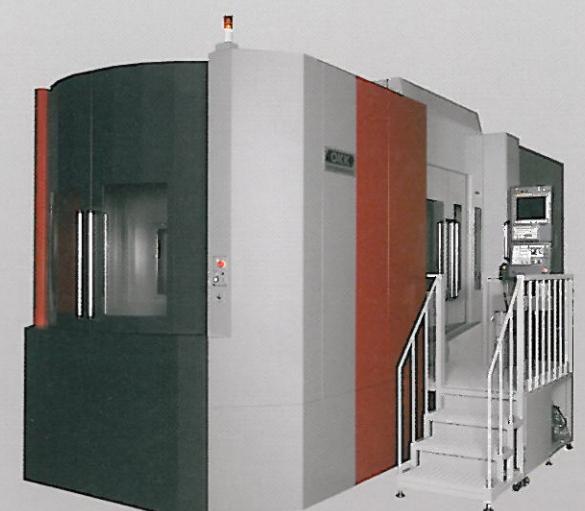

The export of this product is subject to an authorization from the government of the exporting country.  
Check with the government agency for authorization.

### 5-axis Horizontal Machining Center

# HM-X SERIES

HM-X 6000

HM-X 8000

 **tecnor macchine spa**

Milanofiori - Strada 3a - Palazzo B4

HM-X

## Highly-efficient machining of extremely complex parts!

As with all OKKs we paid special attention to the rigidity of the cast body, built solid and features our massive liner roller guides and large-diameter ball screws for the feed system, allowing the HM-X Series to easily cut exotic materials.

All OKK horizontals feature Core chilled pre-tensioned and double-anchored ball screws in order to maintain the high accuracy needed throughout long hours of machining.

X SERIES

5-axis Horizontal Machining Center

# HM-X SERIES

## HM-X 6000

Reliability has further increased with our innovative Trunnion table

Rapid traverse rate (X, Y, Z) 54m/min(2126ipm)  
(OP:75m/min(2953ipm))

Rapid traverse rate (A, B) A:10 B:33.3min<sup>-1</sup>

Maximum workpiece size φ750×H700mm(dia.29.53"×H27.56")

Maximum loading capacity 650kg  
(1433lbs)

Spindle nose (Nominal number) 7/24 taper,  
No.50

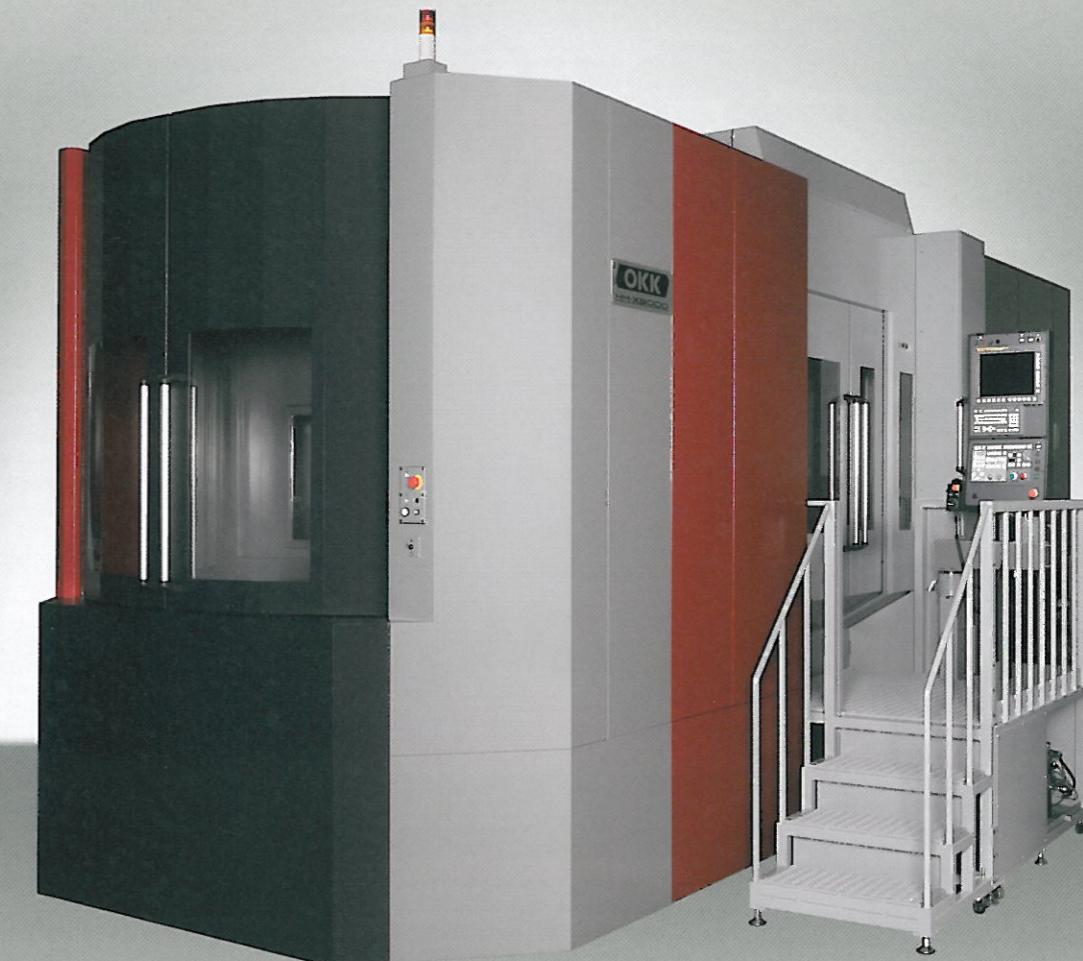

Maximum workpiece size

Spindle torque (25% ED/Continuous rating) 420/238N·m  
(310/176ft-lbs)

Spindle output (30-min/Continuous rating) 30/25kW  
(40/34HP)

Spindle rotating speed 35~12000min<sup>-1</sup>

5-axis machining center is built on the battlefield proven HM-series platform.  
Excellent in both speed and rigidity.

## HM-X 8000

Tilting spindle head structure allows superior 5 axis machining without inclining a heavy workpiece

Up to 2000 kg can be loaded on the table supported with on large crossed roller bearings

Rapid traverse rate (X, Y, Z) 48m/min(1890ipm)

Rapid traverse rate (A, B) A:8.3 B:16.7min<sup>-1</sup>

Maximum workpiece size

Maximum loading capacity 2000kg  
(4409lbs)

Spindle nose (Nominal number) 7/24 taper,  
No.50

Maximum workpiece size

Spindle torque (25% ED/Continuous rating) 623/305N·m  
(460/225ft-lbs)

Spindle output (30-min/Continuous rating) 45/26kW  
(60/35HP)

Spindle rotating speed 35~12000min<sup>-1</sup>

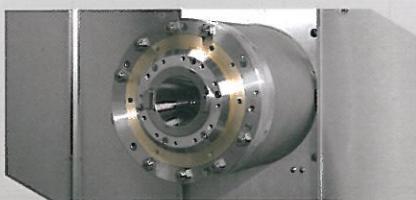

**OKK has integrated our new 5-axis control technologies recently only available on our vertical machining centers.**

# HM-X6000

**High-power, High-torque spindle head paired with our tremendously rigid main body allows you to put the power in the cut.**

高トルクビルトインモータ主軸搭載により、ハイパワーな加工を実現。

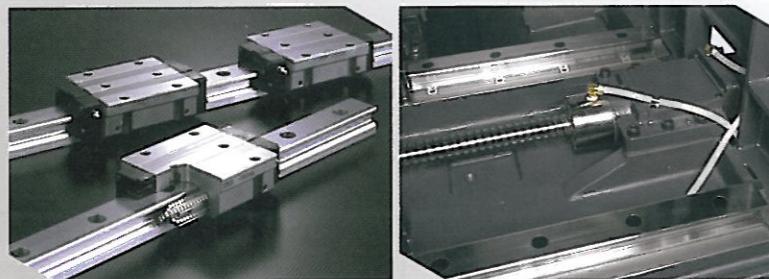

Spindle taper	No.50
Spindle motor	30/25kW(40/34HP)
Maximum torque	420N·m(310ft·lbs) OP:623N·m(460ft·lbs)
Spindle diameter	φ100mm(dia.3.94")

## Exceptional rigidity and accuracy

OKK's liner roller guides and large-diameter ball screws provide a highly rigid feed system.

This combined with our high-power head allow for heavy-duty machining. Rapid traverse rates of 54m/min(2126ipm) (75m/min(2953ipm) optionally) for the X, Y and Z axes, 10 min<sup>-1</sup> for the A axis and 33.3 min<sup>-1</sup> for the B axis enable high-speed machining.

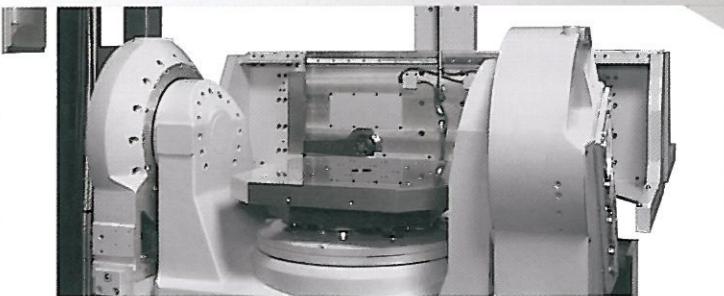

As a part of the standard specification, core chilled and pre-tensioned, double-anchored ball screws matched with thermal displacement correction function (OKK's original function) result in minimal thermal displacement errors for 24-hour high-accuracy machining.

## HM-X SERIES

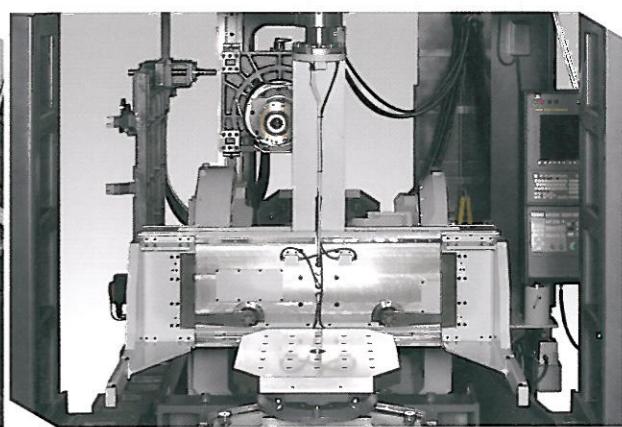

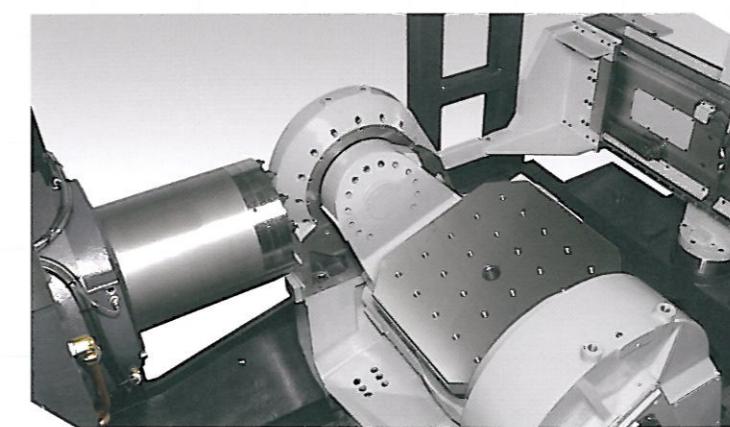

### New innovative Trunnion table

The solid dual-disc clamping method of the Trunnion table ensures the brake retains force of 10000N·m(7376ft-lbs) for the A axis and 6800N·m(5015ft-lbs) for the B axis. The double (hydraulic and mechanical) clamping method is being used for our pallet clamping which ensures the clamping force of 96000N. The pallet clamping continues to hold even in the event of power failure, keeping your employees safe and downtime to a minimal. Trunnion table drive system has been changed to the new roller type from the conventional slide. This allows for improved indexing accuracy, rotary encoders are used for the A and B axes as a part of the standard specification. The tilting axis is outfitted with a no-backlash mechanism. (what mechanism).

### Direct-turn APC (automatic pallet changer) is standard

The APC unit allows for the operator to setup work for the next operation while machining on the other pallet. Just push the pallet ready button once part is ready to be machined. When pallet change m-code is called, the pallet changes even if operator is not present so that long hours of unmanned operations are possible. Use of the direct-turn APC reduces cycle time and floor space.

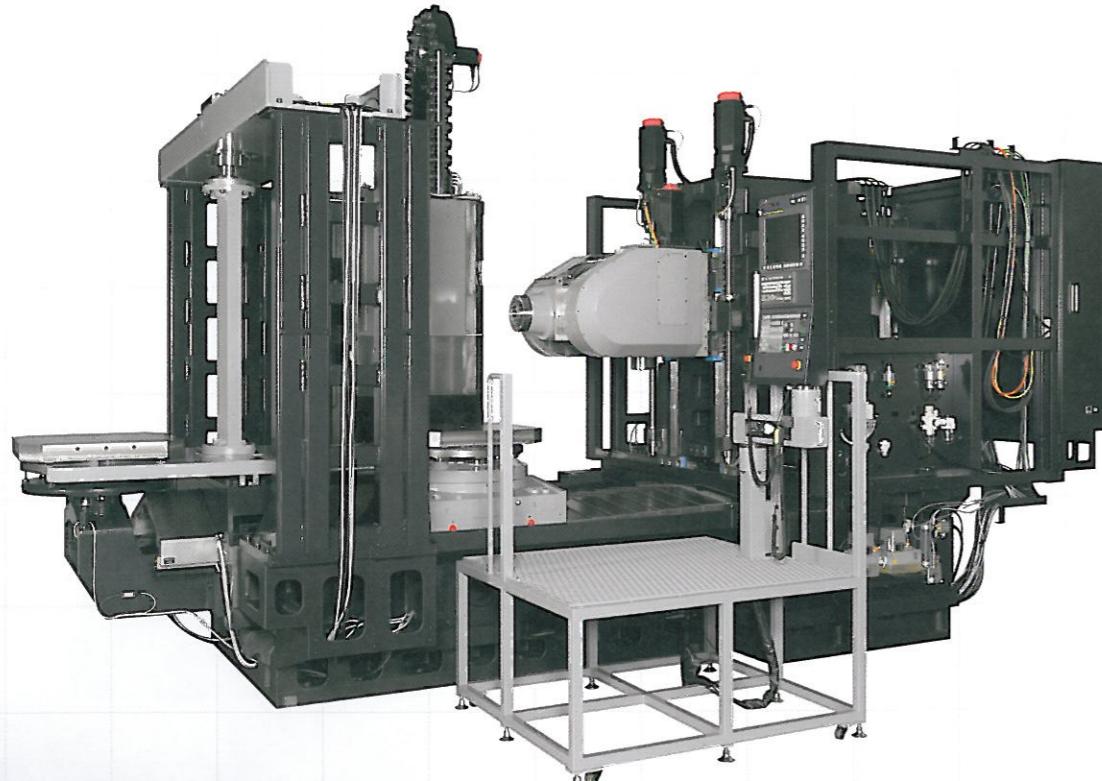

Side view from inside machine

Setup side

**Wide adaptability**  
**Machine medium and large-sized workpieces**  
**regardless of their materials**

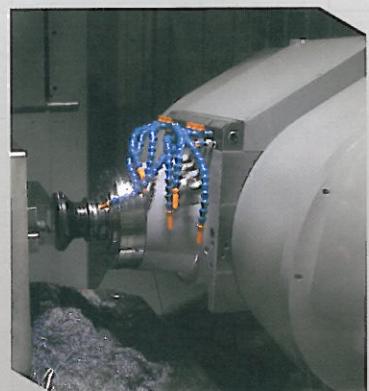

# HM-X 8000

HM-X SERIES

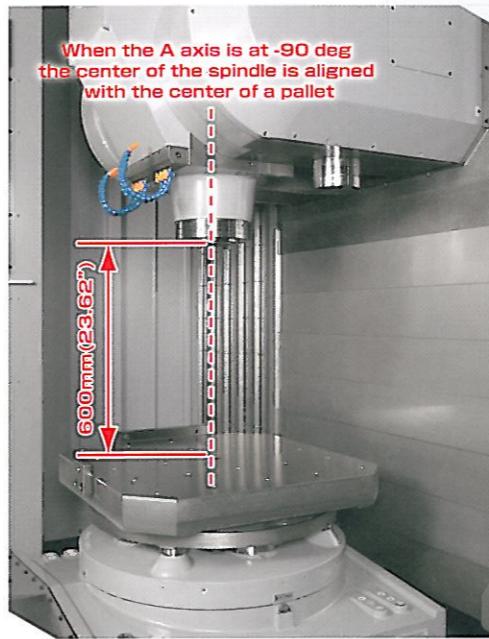

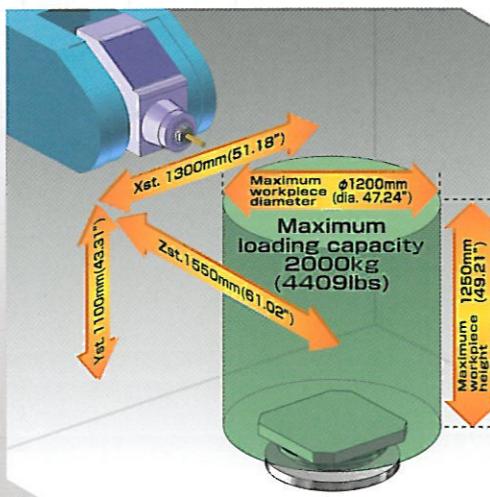

## Highest-in-class spindle torque

45kW(60HP)(25%ED)/623N·m  
(460ft·lbs)(15%ED) high-power and  
high-torque built-in motor

## Maximum 2000kg(4409lbs) can be loaded on the table

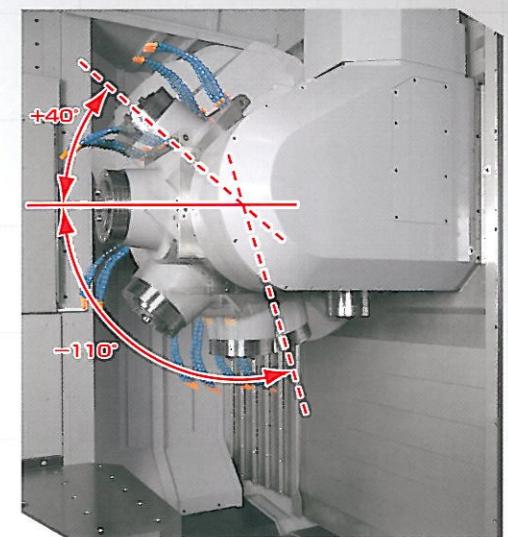

Use of the large-diameter crossed roller bearing improves rigidity of the table and enables loading up to 2000kg(4409lbs). The brake torque has also been improved with the use of spike type brake disc. Medium and large-sized workpieces are easily loadable up to a maximum  $\phi 1200 \times H 1250$ mm (dia.47.24" x H49.21")-high.

When the A axis is at -90 deg  
the center of the spindle is aligned  
with the center of a pallet

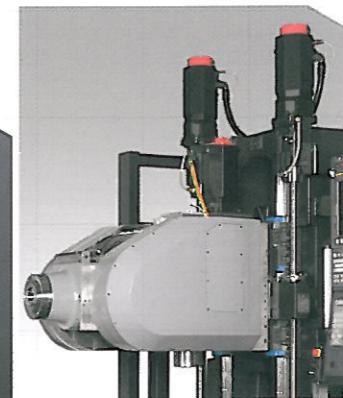

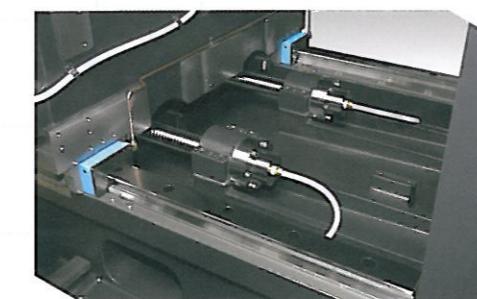

## Tilting axis (A axis) is in the spindle head

The head tilting structure improves ergonomics for the operator allowing them to easily access and visually check workpieces inside the machine. Machining is possible with the spindle positioned in the vertical and horizontal position. When the angle of the A-axis is -90 degrees, access to the position where the center of the spindle is aligned with the center of the pallet.

## Incomparable rigidity and accuracy

Rigid liner roller guides and large-diameter twin ball screws used for the X and Y axes improve machining quality. As standard on all OKK horizontals the HM-X8000 is equipped with core chilled and pre-tensioned, double-anchored ball screws and our thermal displacement correction function (OKK's original function) resulting in minimal thermal displacement errors for 24-hour high-accuracy machining.

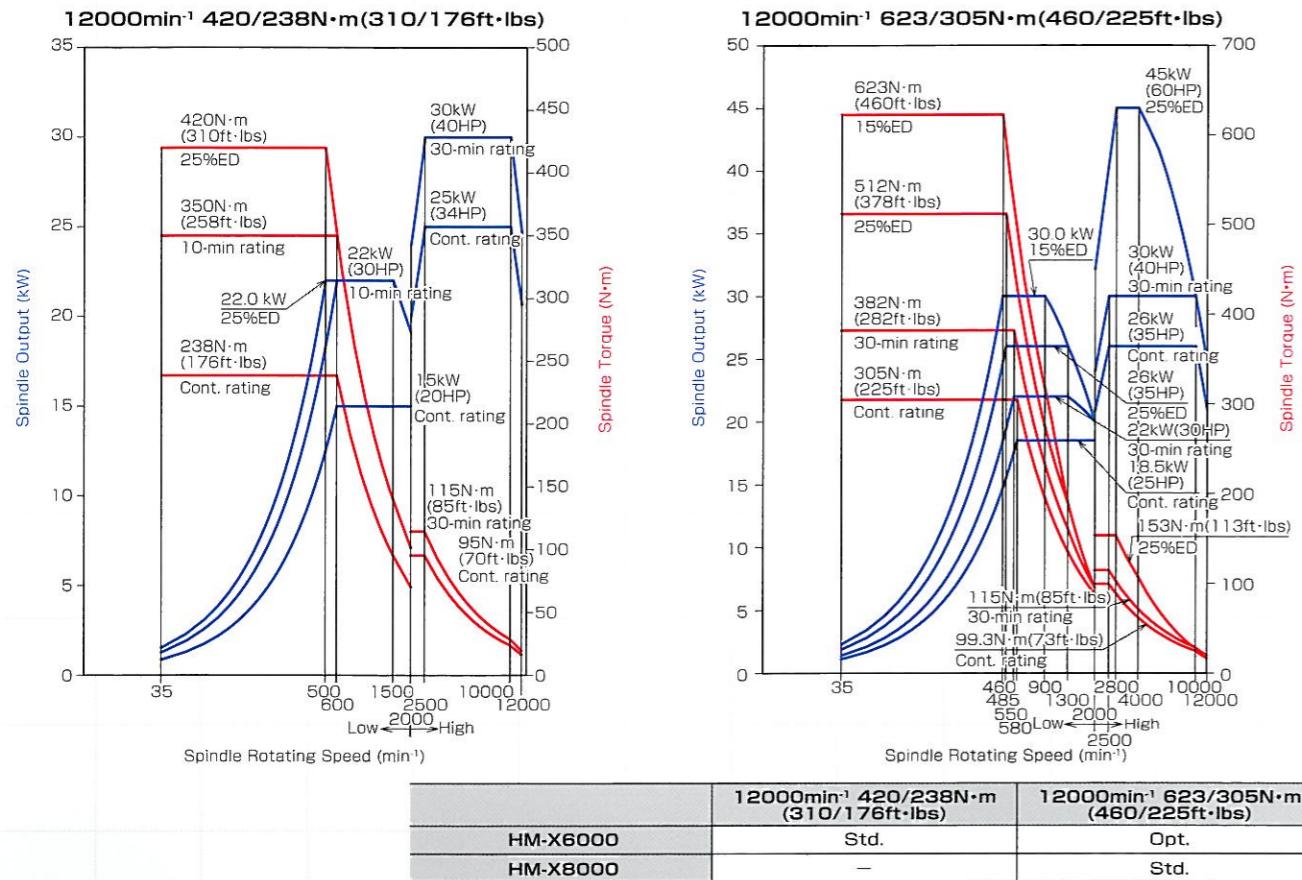

## Accessibility

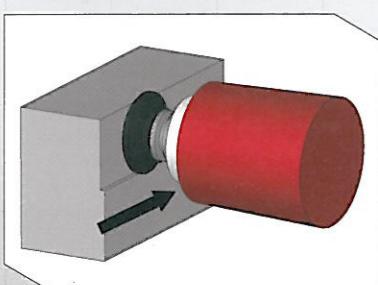

Improved accessibility ensures higher operability. Easily set work offsets and inspect workpieces inside the machine.

#### Remarks

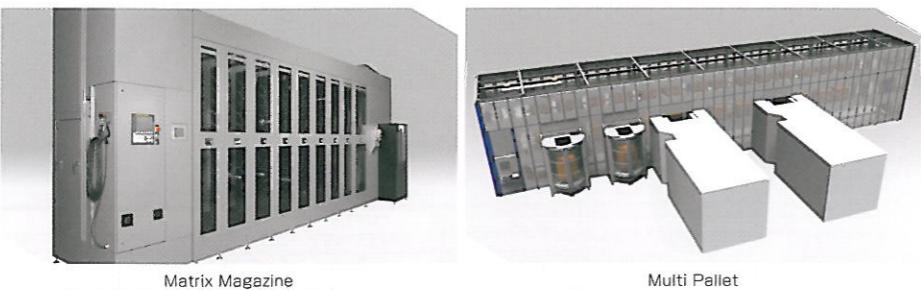

- \*1: The above sample data shows short-time machining examples and the results of continuous machining may differ.
- \*2: The above sample data show the accuracy under the OKK's in-house cutting test conditions. The results may vary with the conditions of the cutting tools and fixtures.
- \*3: The accuracies shown above are the values obtained based on the OKK's inspection standards under the conditions that the machine is installed according to the OKK's foundation drawing while keeping the ambient temperature constant.

## Unmanned Operation

Matrix Magazine and Multi Pallet are available as an option.

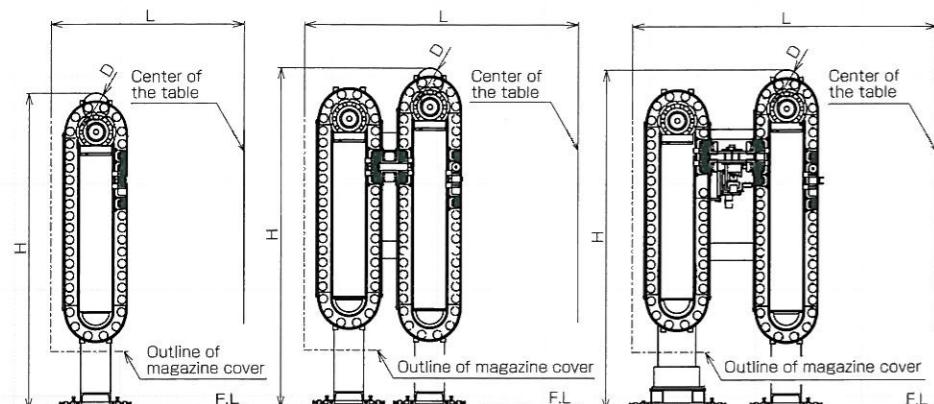

These systems can be expanded easily in the field after its delivery.

## Tool Magazine

Chain-type 40-tool magazine (HM-X6000) and 60-tool magazine (HM-X8000) are included in the standard specification. There is also a Matrix Magazine option, which will increase the capacity up to 161 / 233 / 311 or 389 tools (Capacity of Matrix Magazine).

**40/60-tool magazine    80/116-tool magazine    120/160/176/236-tool magazine**

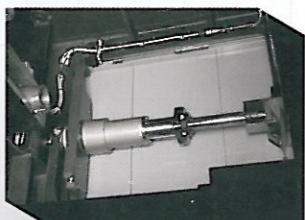

Number of storable tools <sup>1</sup>	HM-X6000			HM-X8000		
	L mm	H mm	D <sup>2</sup> mm	L mm	H mm	D <sup>2</sup> mm
40 tools (Std)	3170 (1480)	2005 (78.94)	4370 (1720)	2130 (83.86)	3305 (130.12)	4265 (167.91)
60 tools (Opt)	3410 (1425)	2820 (111.02)	4370 (1720)	2945 (115.94)	3545 (139.57)	4265 (167.91)
80 tools (Opt)	3410 (1425)	2820 (111.02)	4370 (1720)	2945 (115.94)	3545 (139.57)	4265 (167.91)
116 tools (Opt)	3410 (1425)	3120 (122.83)	4370 (1720)	3245 (127.76)	3545 (139.57)	4265 (167.91)
120 tools (Opt)	3410 (1425)	3120 (122.83)	4370 (1720)	3245 (127.76)	3545 (139.57)	4265 (167.91)
160 tools (Opt)	3410 (1425)	3120 (122.83)	4370 (1720)	3245 (127.76)	3545 (139.57)	4265 (167.91)
176 tools (Opt)	3410 (1425)	3120 (122.83)	4370 (1720)	3245 (127.76)	3545 (139.57)	4265 (167.91)
236 tools (Opt)	3410 (1425)	3120 (122.83)	4370 (1720)	3245 (127.76)	3545 (139.57)	4265 (167.91)

\*1: Number of storable tools of the 40/60-tool magazine refers to a total number of tools including the tool in the spindle i.e. subtract one from the above for the actual number of tools storable in the magazine.

\*2: The dimension D means the maximum tool diameter applied to the tool with no tools placed in the pots in the tool magazine that adjoin the pot designated to the tool. It is Ø115 mm in any of the above cases unless both pots have no tools.

## ATC [Automatic Tool Changer]

The ATC unit offers stable tool changes and amazing durability. The speed variable ATC function included in the standard specification enables smooth tool change in the use of heavy or large-diameter tool as the ATC turning speed is reduced automatically according to the setting made at the time of registration of the relevant tool.

	HM-X6000	HM-X8000
Maximum tool diameter	Ø270mm (dia.10.63")	Ø270mm (dia.10.63")
* Ø115mm(dia.4.53") unless adjoining pots have no tools	* Ø115mm(dia.4.53") unless adjoining pots have no tools	* Ø115mm(dia.4.53") unless adjoining pots have no tools
Maximum tool length	500mm (19.69")	400mm (15.75")

Maximum tool mass (in the case of slow turning)  
25kg (55lbs)

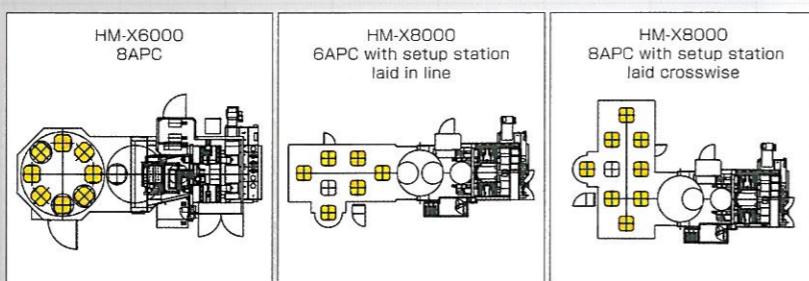

Maximum tool mass (in the case of slow turning)  
25kg (55lbs)

\*20kg(44lbs) when turning at normal speed \*15kg(33lbs) when turning at normal speed

## APC [Automatic Pallet Changer]

The direct-turn 2APC unit is included in the standard specification. The automatic multi pallet changer and the FMS are available optionally. The units are compatible with the through-pallet jig interface and the rotary joint type jig interface.

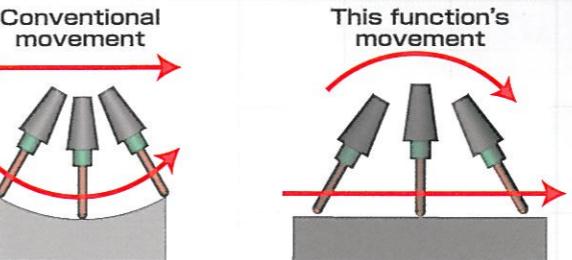

HM-X6000	8APC	5520x8760mm(217.32"x344.88")
	6APC laid in line	6000x13400mm(236.22"x527.56")
HM-X8000	6APC laid crosswise	6130x12100mm(241.34"x476.38")
	8APC laid in line	6000x15000mm(236.22"x590.55")
	8APC laid crosswise	7730x12100mm(304.33"x476.38")

## 5-axis Support Technologies

### 5-axis Control Function

#### Tool Center Point Control

Conventional movement  
This function's movement

Produces errors due to movement of rotation axis

Loci of the tool tip as instructed

Linear interpolation while changing the angle of the tool normally requires complicated machining data using minute segments as shifts in the direction of the axis of the tool need to be instructed according to the change in the tool's angle.

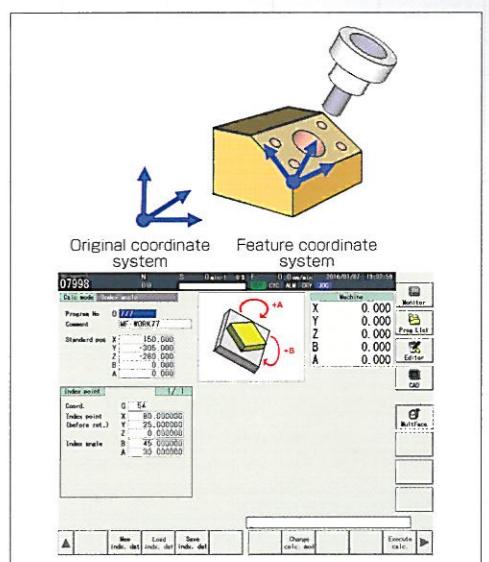

By using the Tool Center Point Control, location of the tool tip are as instructed regardless of the instructions for the rotation axis. As speed of the tool tip is constant (designated speed), further high-quality surfacing can be achieved.

### 5-axis Indexing Function

#### Inclined Surface Indexing (Machining) Command HM-X6000 Opt. HM-X8000 Std.

The inclined surface indexing (machining) commands allow setting as desired the surface to be machined by using the newly defined coordinate system (feature coordinate system).

It enables efficient creation of the machining programs similar to the programming for the normal 3-axis machining centers.

### MULTI-FACER II

When indexing the planes to be machined on the 5-axis machining centers, it may take time for setting the workpiece origins. Those workpiece origins can be set easily by using the MULTI-FACER II that enables creating the programs for indexing easily without requiring calculations.

### 5-axis Measurement Function

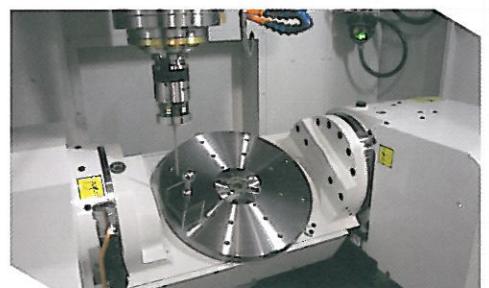

#### A<sup>5</sup> system Opt.

When 5-axis machining, One key component to high accuracy 5 axis machining is ensuring that the center position of the rotation axis has been set correctly.

If wrong this significant effects the machining accuracy.

OKK has reduced the error that can be generated by the operator with our A<sup>5</sup> System, (OKK's Original software) that allows the operator to easily measure and set the center of rotation axes automatically with use of this software.

A<sup>5</sup> System improves upon the already high-accuracy 5-axis indexing capability and simultaneous 5-axis machining.

## Specifications

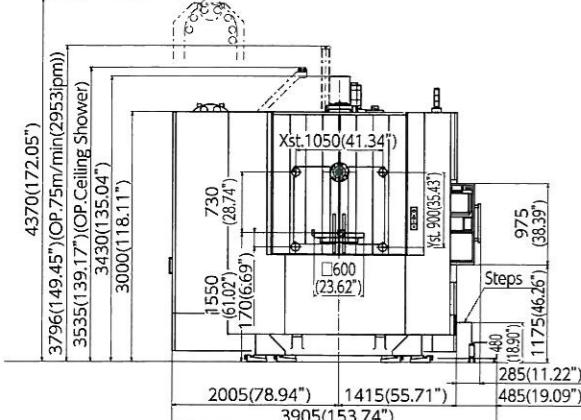

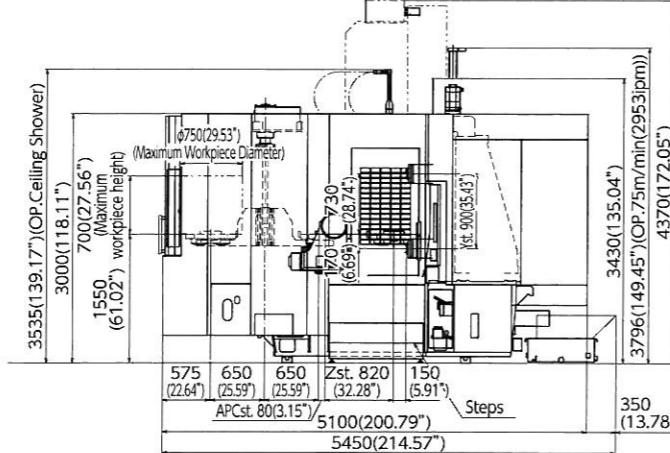

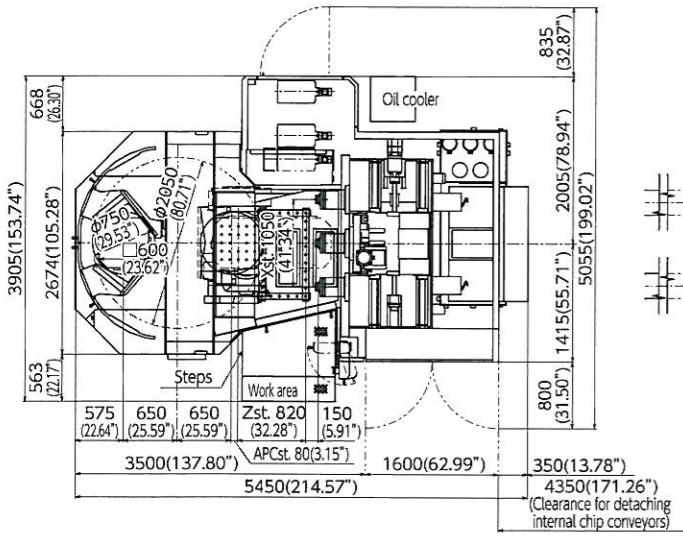

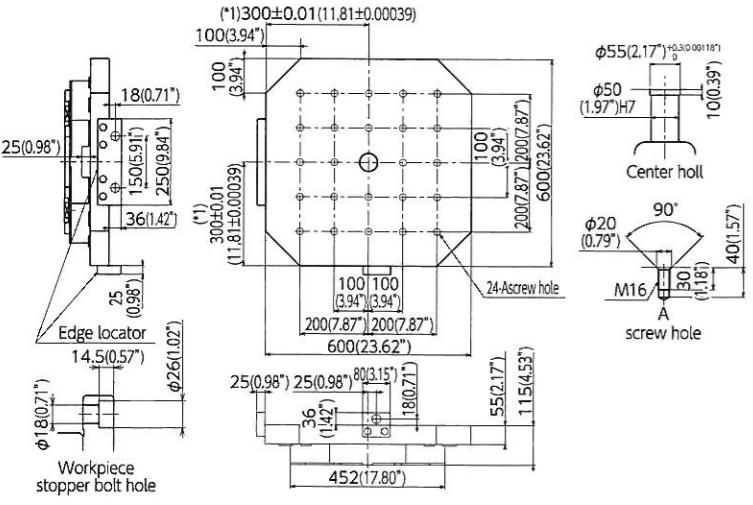

Item	Unit	HM-X6000	HM-X8000
Travel on X axis (Column: right / left)	mm	1050(41.34")	1300(51.18")

## F31i-B5(WindowsCE Open CNC)

Standard Specification	HM-X6000	HM-X8000
Controlled axes: 5 (X, Y, Z, A, B)	○	○
Simultaneously controlled axes: 5 axes	○	○
Least input increment: 0.001mm / 0.0001"	○	○
Max.programmable dimension: ±999999.999mm / ±39370.0787"	○	○
Absolute / Incremental programming: G90 / G91	○	○
Decimal point input / Pocket calculator type decimal point input	○	○
Inch / Metric conversion: G20 / G21	○	○
Program code: ISO / EIA automatic discrimination	○	○
Program format: FANUC standard format	○	○
Nano interpolation(internal)	○	○
Positioning: G00	○	○
Linear interpolation: G01	○	○
Circular interpolation: G02 / G03(CW / CCW) (including Radius designation)	○	○
Cutting feed rate: 6.3-digit F-code, direct command	○	○
Dwell: G04	○	○
Manual handle feed: manual pulse generator 1 set (0.001, 0.01, 0.1mm)	○	○
Rapid traverse override: 0 / 1 / 10 / 25 / 50 / 100%	○	○
Cutting feed rate override: 0 to 200% (every 10%)	○	○
Feed rate override cancel: M49 / M48	○	○
Rigid tapping: G54, G74 (Mode designation: M29)	○	○
Part program storage capacity: 160M[64KB]	○	○
No. of registered programs: 120	○	○
Part program editing	○	○
Background editing	○	○
Extended part program editing	○	○
15" color LCD/QWERTY key MDI	○	○
Clock function	○	○
MDI (Manual Data Input) operation	○	○
Memory card / USB interface	○	○
Spindle function: 5-digit S-code direct command	○	○
Spindle speed override: 50 to 150% (every 5%)	○	○
Tool function: 4-digit T-code direct command	○	○
ATC tool registration	○	○
Auxiliary function: 3-digit M-code programming	○	○
Multiple M-codes in 1 block: 3 codes (Max. 20 settings)	○	○
Tool length offset: G43, G44/G49	○	○
Tool diameter and cutting edge R compensation: G41, G42/G40	○	○
Tool offset sets: 99 sets	○	○
Tool offset memory C	○	○
Manual reference position return	○	○
Automatic reference position return: G28/G29	○	○
2nd reference position return: G30	○	○
Reference position return check: G27	○	○
Automatic coordinate system setting	○	○
Coordinate system setting: G92	○	○
Machine coordinate system: G53	○	○
Workpiece coordinate system: G54 to G59	○	○
Local coordinate system: G52	○	○
Program stop: M00	○	○
Optional stop: M01	○	○
Optional block skip: /	○	○
Dry run	○	○
Machine lock	○	○
Z-axis feed cancel	○	○
Auxiliary function lock	○	○
Program number search	○	○
Sequence number search	○	○
Program restart	○	○
Cycle start	○	○
Auto restart	○	○
Single block	○	○
Feed hold	○	○
Manual absolute on/off: parameter	○	○
Sub program control	○	○
Canned cycle: G73, G74, G76, G80 to G89	○	○
Mirror Image function: parameter	○	○
Automatic corner override	○	○
Exact stop check mode	○	○
Programmable data input: G10	○	○
Custom macro	○	○
Graphic display	○	○
Backlash compensation for each rapid traverse and cutting feed	○	○
Smooth backlash compensation	○	○
Memory pitch error compensation(interpolation type)	○	○
Skip function	○	○
Tool length manual measurement	○	○
Emergency stop	○	○
Data protection key	○	○
NC alarm display / alarm history display	○	○
Machine alarm display	○	○
Stored stroke check 1	○	○
Load monitor	○	○
Self-diagnosis	○	○
Absolute position detection	○	○
Manual Guide I (Basic)	○	○
Stored stroke check 2, 3 (for OKK use)	○	○
3rd & 4th reference position return (for OKK use)	○	OP

Standard Specification	HM-X6000	HM-X8000
Tool center point control for 5 axis machining	PK2,3	○
Inverse time feed	PK2,3	○
Unidirectional positioning: G60	PK2,3	○
Data server: ATA card (GB)	PK2,3	○
Coordinate system rotation: G68, G69	PK3	OP
Instruction of inclined plane indexing	PK3	—
Manual feed for 5 axis machining	PK3	—
Tool length compensation along tool vector	PK3	—

## Functions for Operability and Environmental Measures

## ECO Measures

## ECO Sleep Function

In order to reduce wasted power, air, etc., the power saving mode is activated when the machine has been in the standby state for a specified period of time. During the power saving mode, servos, chip conveyors, etc. are turned off. The mode is cancelled automatically when the setup operation is finished (door is closed).

## LED Lamp HM-X6000 Opt. HM-X8000 Std.

LED lamps are used for reduction in heat generated by the lighting system and for saving power.

## Inverter Oil Cooler

## HM-X8000 Std.

- Inverter oil cooler provides limited temperature variation and realizes energy consumption.
- Improved Operability
- 15-inch Operation Panel

F31i-B

- Minute chips can enter the conveyor through a gap on the hinged plate. Therefore, inside the conveyor needs to be cleaned frequently.
- Scrapers can easily catch long chips. Therefore, shortening the chips (for example by using the step feed) or removing the chips is required if left un maintained the drum filter may get damaged.
- When flow rate of the coolant is large, filters can be clogged with chips out of the conveyor case. Therefore, combined use of a magnet plate and frequent cleaning of filters is recommended.

This photo shows the hinged pan type chip conveyor (fixed type and tilting type chip buckets are available optionally).

Type of chip conveyor	Hinged	Scraper	Magnet scraper	Scraper with drum filter	Magnet scraper with drum filter
