\*1) NC Servo Tailstock

# The Definitive Structure

## Advantage

### Bigger Axis Configuration

Configuration 6 control axes and can execute turning process and milling process continuously.

**YS** (Standard) : 6-Axes

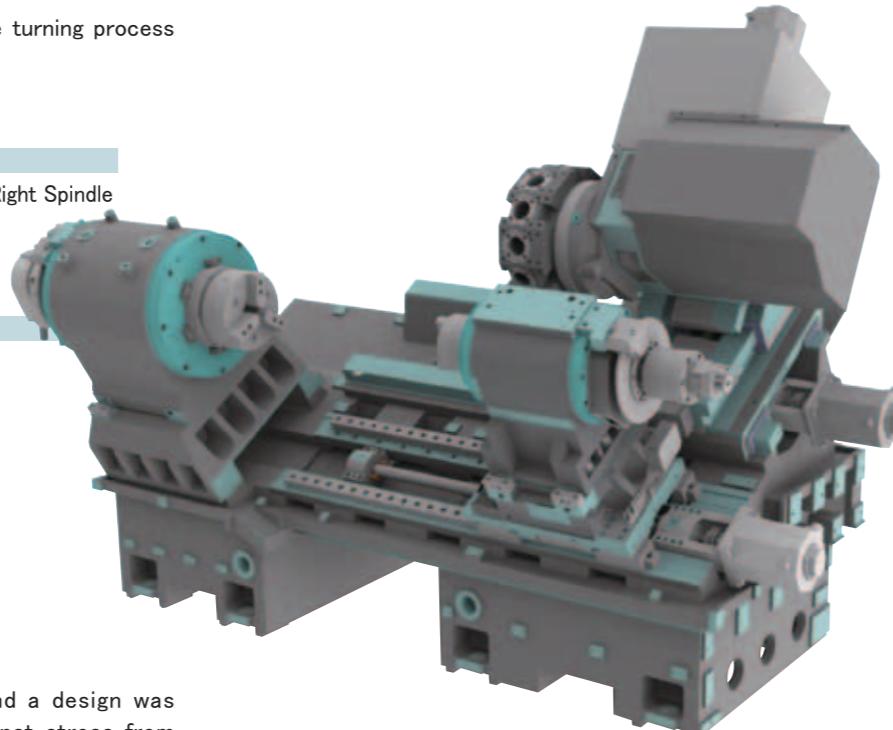

X/Z/Y/C1/C2/A

Left Spindle + Milling Turret + Right Spindle

**Y** (Standard) : 5-Axes

X/Z/Y/C/A

Left Spindle + Milling Turret + NC Servo Tailstock

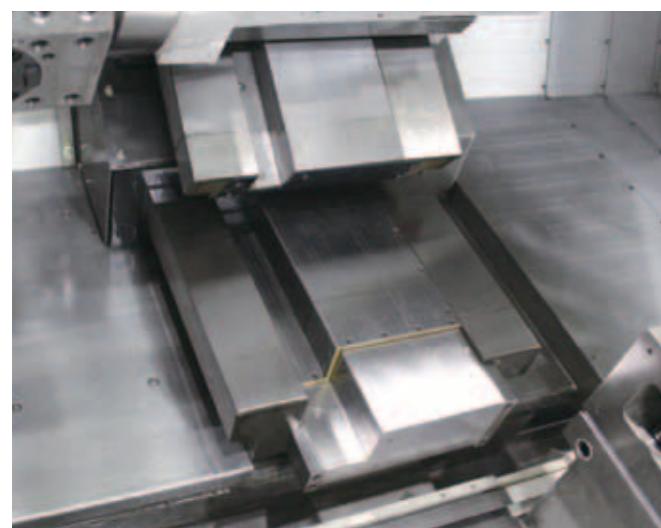

### Advanced 3D Analysis

The structure was analyzed thoroughly and a design was adopted which can maintain accuracy against stress from various directions during combined machining.

### Sturdy Structure

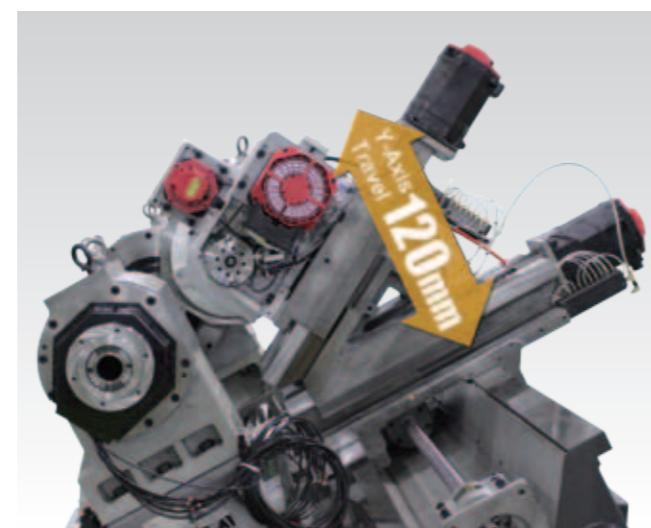

The highly rigid 30° slant bed and rectangular slideways on the sliding axes (X, Y, Z) ensure stable machining.

### 120mm Y-Axis Travel

The plus side is increased by 40% (-50 to +70 mm) compared to our former machine.

The 3.0kW high power servomotors are used.

### Stronger Milling Power 7.5kW,

### 12-Station Milling Turret

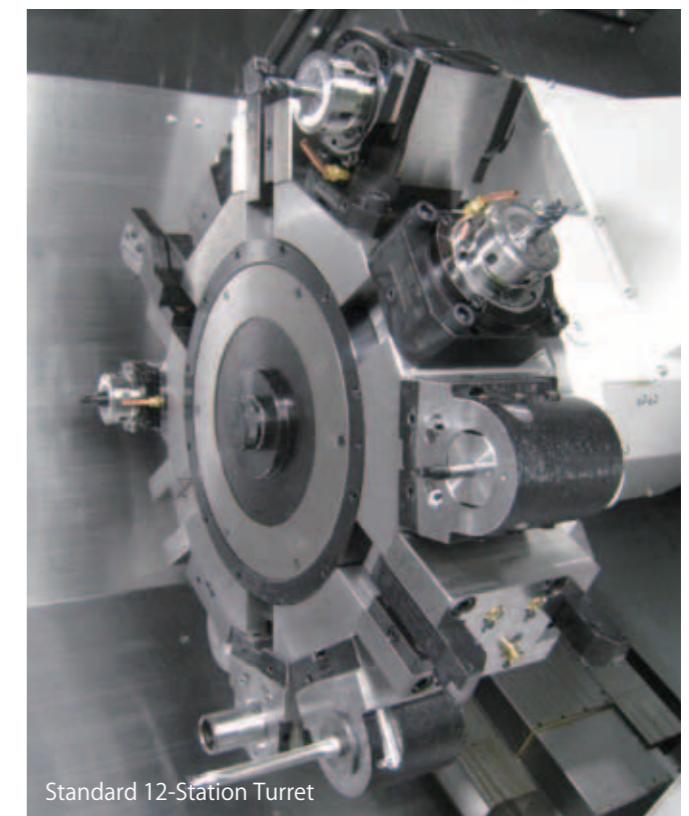

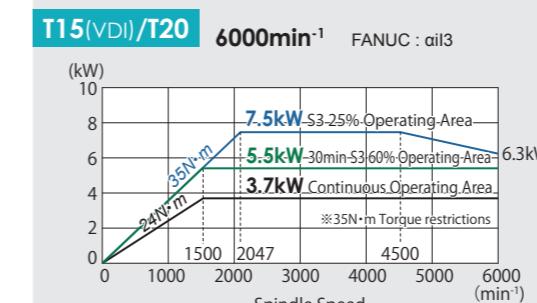

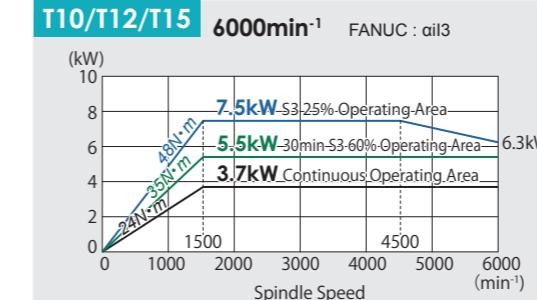

All holder type employing bolt tightening system. Powerful holders taking advantage of 7.5 kW motor achieve great milling capability.

The number of tools of a turret can be selected from 12 (T12) as standard and 10 (T10)/15 (T15)/20 (T20) as optional for optimum machining.

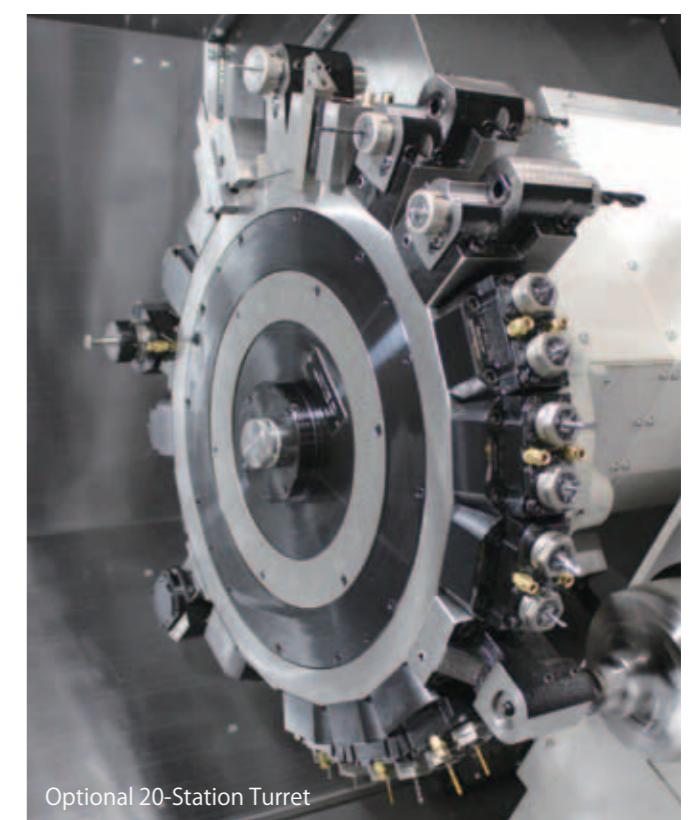

VDI type 15-station turret is also available.

| Type of Turret                | T12 (STD.) | T10 | T15/T15VDI | T20 |
|-------------------------------|------------|-----|------------|-----|
| Number of Attachable Tools    | 12         | 10  | 15         | 20  |
| Height of Square Tool Shank   |            | 25  |            | 20  |
| Diameter of Boring Bar Shank  | 50         |     | 40         | 32  |
| Diameter of Rotary Tool Shank | 26         |     |            | 20  |

### Power Tool

Standard 12-Station Turret

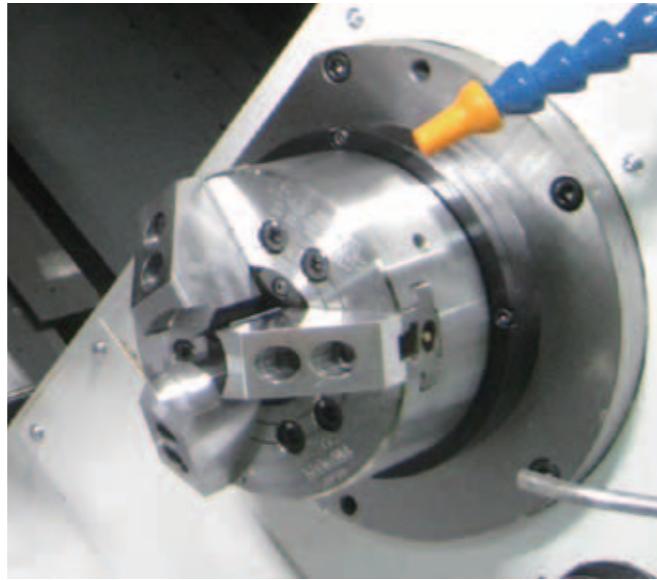

Optional 20-Station Turret

# Capability • Performance

## High Power Built-in Motor

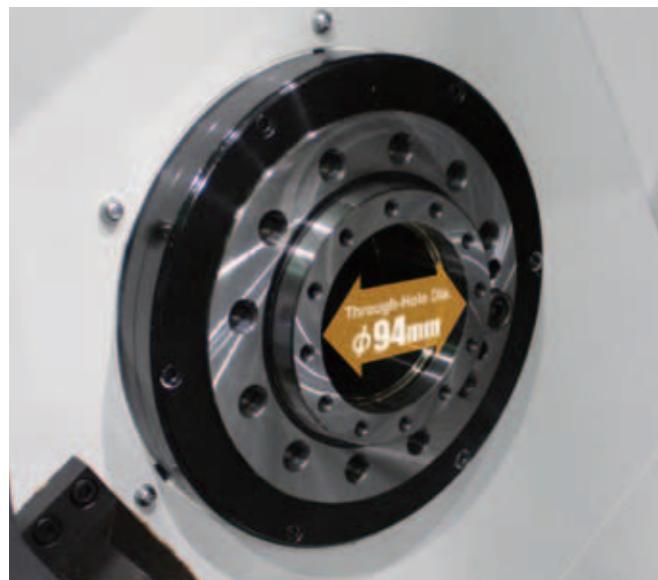

High power built-in motor spindles are used for the left spindle and the right spindle.

## Ø94mm Hole Through Spindle

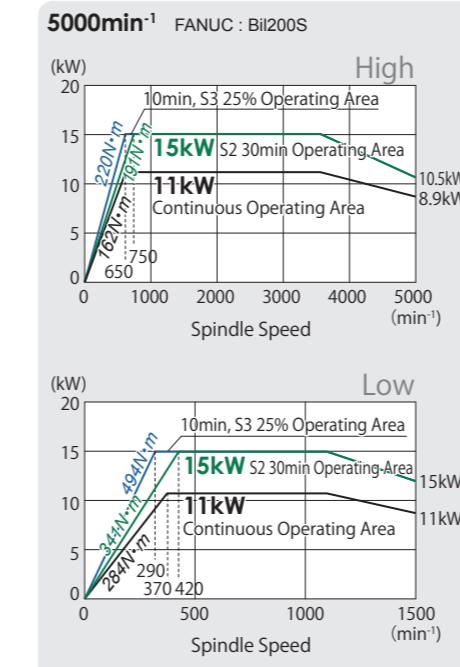

Large spindle-through hole supports bar machining.  
Automatic machining can be realized by installing optional bar feeder.

|               | TS-3000                                       | TS-4000      | TS-5000                              |

| Right Spindle | Through-Hole Dia. 53mm<br>Spindle             | 53mm         | 63mm<br>OP.53mm                      |

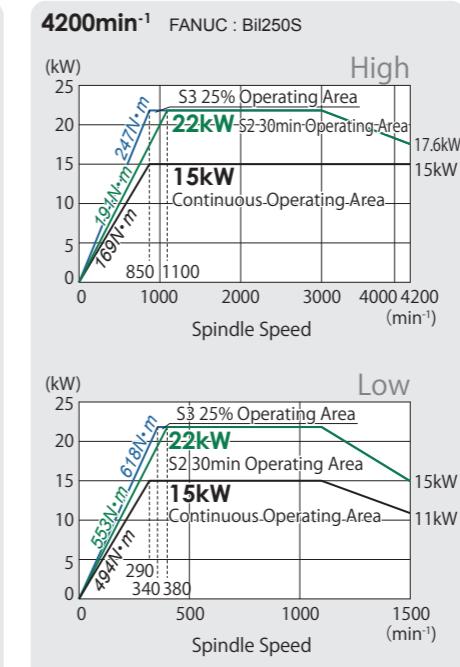

\* Please note the bar capacity follows types of chucks and cylinders.

## Main Spindle (Left Side)

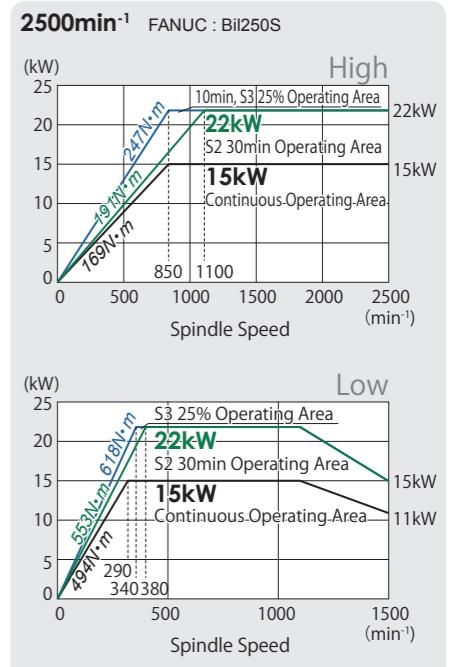

### TS-3000

### TS-4000/TS-5000 (Op.)

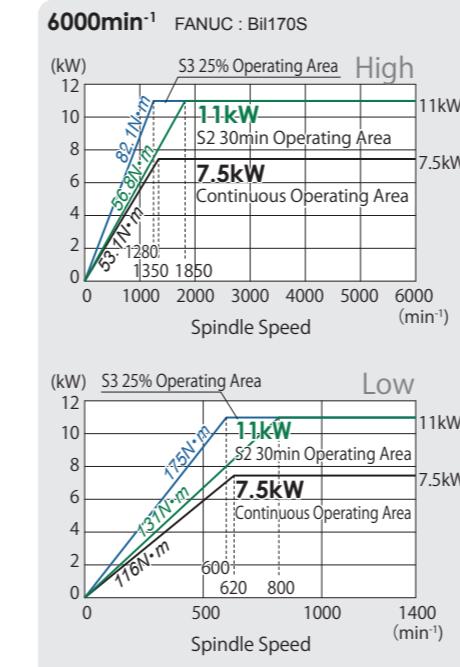

### TS-5000

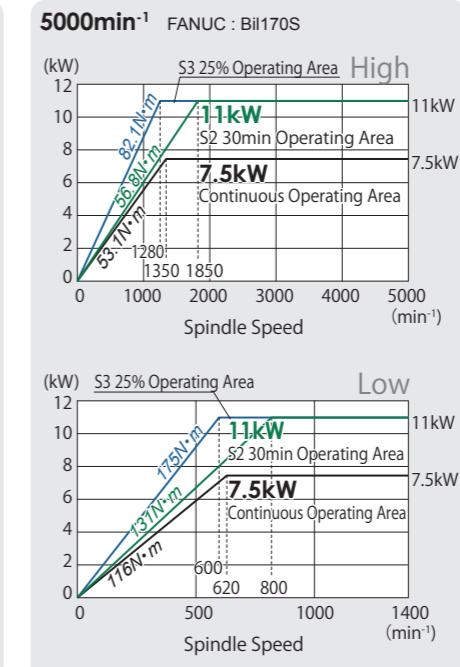

## Sub Spindle (Right Side, For YS Type)

### TS-3000/TS-4000

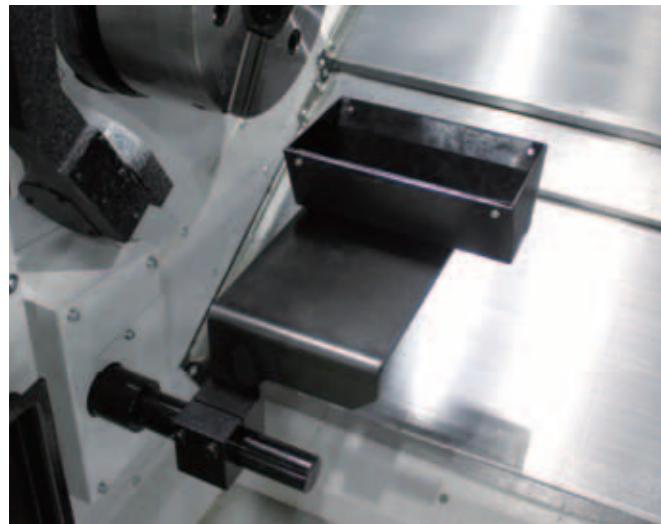

### TS-5000

## Parts Catcher<sup>\*1</sup>

Ability of parts catcher OD  $\phi$ 80mm, Length 200mm, Weight 3kg.

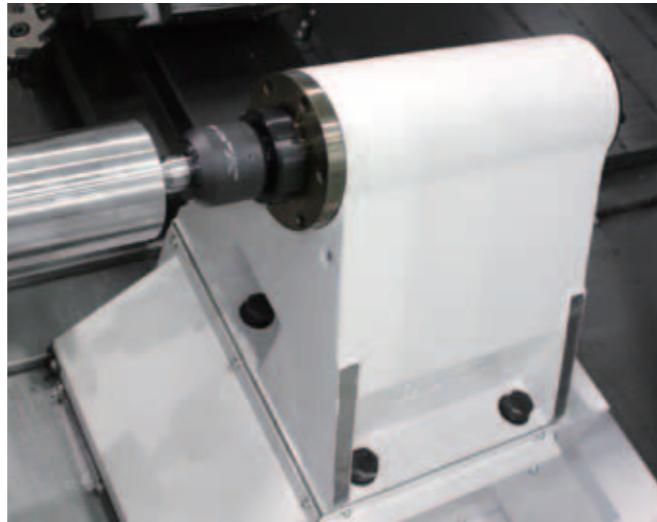

Workpieces cut off during bar machining are safely caught and unloaded to the collection box.

\*1) It does not support TS-5000.

## NC Servo Tailstock

NC servo tailstock is a standard accessory of Y specification. Even shaft workpieces can be machined powerfully without paying attention to runout.

|               | TS-3000 | TS-4000 | TS-5000               |

### VDI Type

Perfect Dialogue Program Processor

Takisawa Original Software

# TiwaP-I

**TiwaP-I** is  
Takisawa Original Software  
Which is Easy for

"Input"

Easy Programming by Dialogue Conversation

TiwaP-I is based on Process Registration type Programming involving step by step Process

"Confirmation"

Machining Simulation

Cutting Detail will be Simulated by "3D Animated Cartoon" or "Tool Trace display"

"Operation"

Automatic Operation

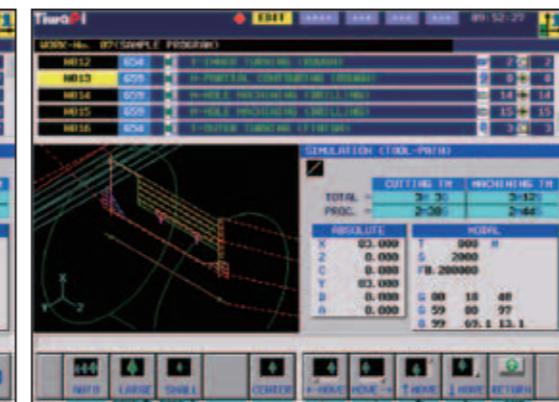

The arrangement of machining spindles and processes is automatically recognized to execute the spindle control and C-axis zero point return operation efficiently.

**Stored Number  
of Program** 99

Available for max 999 Process on each program (incl. last process) and available max 99 Cutting Configurations.

## Machining Simulation

Tool passes can be certainly checked before test cuttings by "3D Animation" or "Tool Tracking".

**Knowledge of the G-codes is not necessary to create programs.**  
**Anyone can easily create programs.**

Utilizing G code knowledge, **TiwaP-I** creates a program of complicated processes.

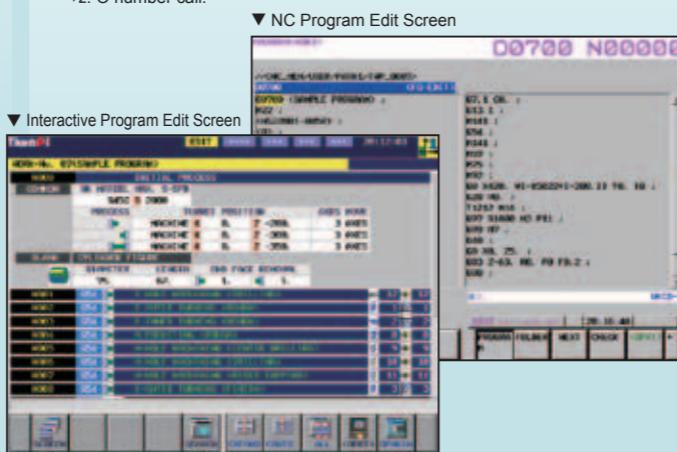

Further, **TiwaP-I** enables the interactive program to perform machining in cooperation with an NC program<sup>\*</sup>.

- ① NC program<sup>\*</sup> can be called (set) in the interactive (TiwaP-I) program.
- ② NC program<sup>\*</sup> converted into NC statements by interactive operation (TiwaP-I) can be called (set) in the NC program edited manually.

\*1: File name to which NC programs edited manually or created by CAD/CAM have been registered.

\*2: O number call.

## Feature of **TiwaP-I**

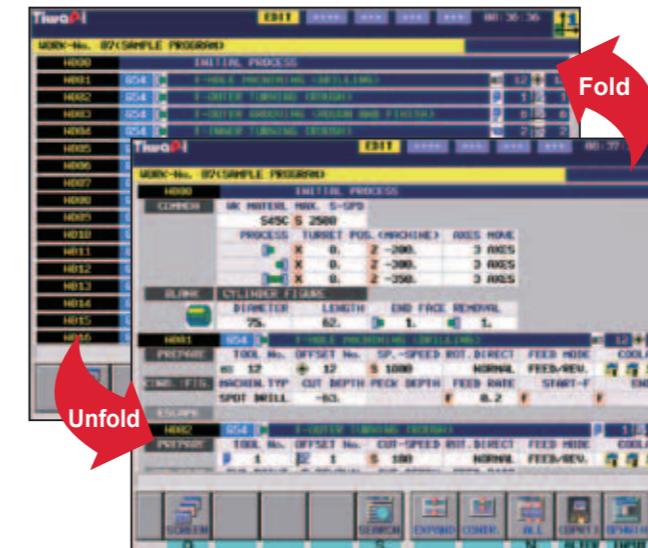

### Easy to See

Takisawa's original "Process fold /unfold function" and lucid icons improve visibility.

Operator-friendly and easy to see screen is realized.

▼ [Folder Display for all Process]

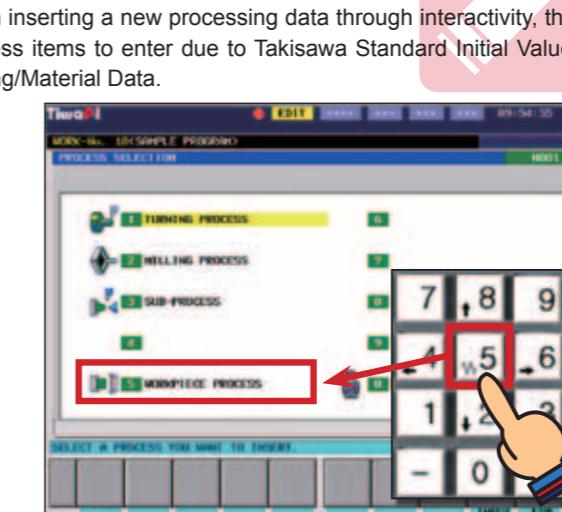

All the flows of Process can be checked on the screen.

▲ [Elaborate Process display function]  
All processing data can be checked and seen on the screen.

### Speed Up

When inserting a new processing data through interactivity, there are less items to enter due to Takisawa Standard Initial Value & Tooling/Material Data.

Example) When selecting "workpiece process" just press numeric key "5".

In case of new workpiece programming, the number of input items is decreased due to automatic cutting data setting.

### Easy to Use

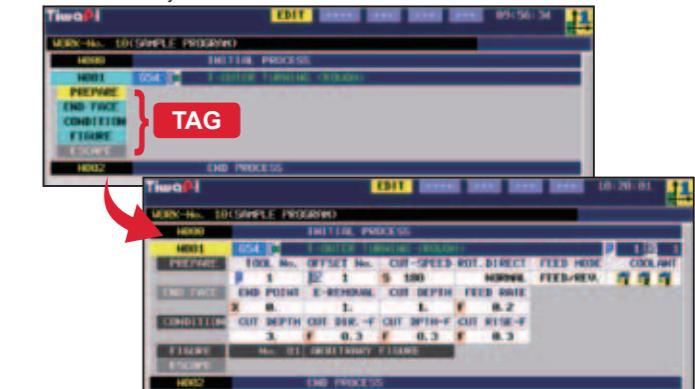

During preparing Program, "Reliable Guide Function" provides support

► "Reliable Guide Function"

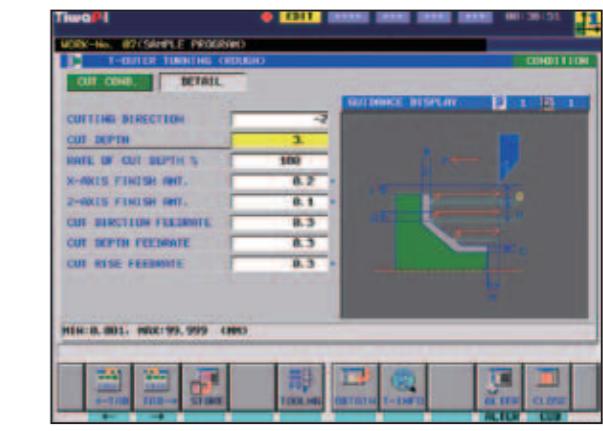

The tag will be arranged in the optimum order automatically by interacting with the machine and selecting the required program.

It is easy for beginners to use interactive data inputting with guiding Figures & Icons. Symbolic soft key on the exclusive window helps inputting complicated arbitrary shapes.

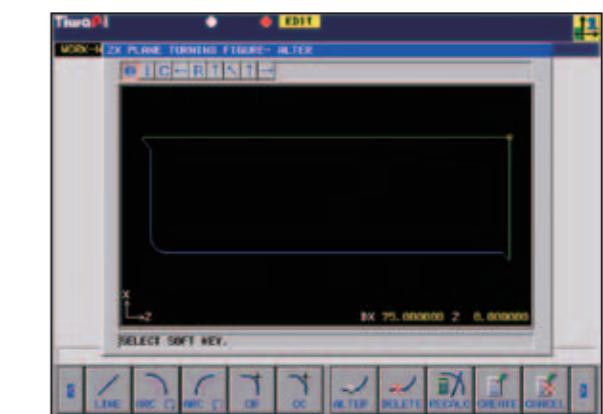

▼ By "Reliable Guide Function" Process Tag will be made automatically

▲ By just inserting Cutting data on each process Tag, the Process can be completed.

Suitable Cutting Data can be selected from reference Data Bank

A certain shaped window with a built-in intersection point that contains an automatic calculation.

Takisawa Standard Initial Value can be customized with your know-how.

► "Tooling Data & Cutting Parameter"

Cutting parameters (cutting speed, feed rate, and depth of cut) are automatically selected and suggested to the operator by the combination of work piece and the material of inserted tool.

It is a great assist for set-up programs.

● : Standard ○ : Optional — : None

\* For other optional accessories, please contact us.

\*1) Installation is allowed only when hollow type hydraulic chuck/cylinder are provided.

\*2) Rear or side discharge chip conveyor must be selected and installed.

\*3) Please note the bar capacity follows types of chucks and cylinders.

By default, the following hydraulic chuck/cylinder are provided.

|                          | TS-3000      |                       | TS-4000      |                       | TS-5000      |                       |

\*4) Lubricant mixing in water soluble coolant is separated, and only the coolant is returned to the coolant tank. The lubricant collected in the lubricant collection box must be drained periodically.

\*5) With ejecting nut.

\*6) Option in U.S.A.

\*7) For TS-4000, TS-3000.

\*8) TS-3000/4000 : Left Open, TS-5000 : Double Doors

\*9) Standard only for Europe, North America and Russia.
